

Configuring Windows Computers to the Guest or Unsecure Wireless Network

1. Enable your wireless network service. This may be a switch on the computer, or software that will turn on your network card.
2. Go to **Control Panel > Network and Internet Connections > Network Connections**. Right-click on **Wireless Connection** and select **Properties** from the submenu that is displayed.
3. Select the **Wireless Networks** tab. Click on the Add button.

4. On the Association tab, type **Guest** or **Unsecure** (case-sensitive) in the Network Name (SSID) Box.
5. Verify **Network Authentication** is set for **Open**.
6. Data Encryption is **Disabled**.
7. Click **OK**.

Joining Guest or Unsecure:

Click the wireless network icon in the System Tray and choose **Unsecure** or **Guest**.

By choosing **Unsecure**, it is required to register your computer the first time you launch Internet Explorer or any web browser. AD account required for registration. (students, faculty and staff only)

Guest has HTTP(S) access only. Registration not required.
